Hello Dave,

We performed a GAP study on Rodeo Road in the area of Paseo de los Pueblos. As the study shows, there are not enough gaps in traffic to allow pedestrians to cross. In light of this I recommend we place pedestrian crossing prohibition signs at all uncontrolled intersections forcing pedestrians to cross at signalized intersection. Please let me know if you have any questions. Thanks.

Hi Dave,

Rodeo Road is a very busy road which would be hard for pedestrians to cross. We would prefer that pedestrians cross it at signalized intersection. We will perform a GAP analysis to quantitatively determine if a pedestrian crossing is appropriate at this location. If it is determined that it is not, we will ask the Roadway and Trails Engineering Division to prohibit pedestrian crossing with signage. I will let you know when the study is completed. Thanks.

John,

...

I received an inquiry from DOT questioning why there is no curb ramp on the north side of Rodeo Road across from Paseo de los Pueblos. My understanding of ADA is that we need curb cuts at all "T" intersections. This isn't the case on the north side of Rodeo Road. Do you know if there were other considerations? Can you weigh in?

...

Thank you,
David A. Chapman
